Mini Project 1-Python Module

Project Definition:

In this project, we have to design a software for Banking System using Python which manages all the basic functions like creating a new account, view account holders record, withdraws and deposit amount, balance inquiry, and so on which can be identified from the figure below.

```
=====================================
 ----Welcome to Times Bank----
*************************************
=<< 1. Open a new account        >>=
=<< 2. Withdraw Money            >>=
=<< 3. Deposit Money             >>=
=<< 4. Check Customers & Balance >>=
=<< 5. Exit/Quit                 >>=
*************************************
Select your choice number from the above menu : 1
Choice number 1 is selected by the customer
Number of Customers : 1
Input Fullname : mina Singh
Please input a pin of your choice : 5678
Please input a value to deposit to start an account : 2000
```

 In this mini-project, there is no login system,so it is very easy to use all those available features without any restriction.

Project Description:

Talking about the features of this software,

1. A user can create an account by providing an initial amount to deposit.
2.   Then the user can also deposit and withdraw money just by providing the user account name ,pin number and entering the amount.
3.   Also, the user can check for the customers and their balance. This simple console-based system provides the simplest management of bank account and transaction.
